

VISION

Leading interprofessional simulation-based learning in health, to improve patient safety and quality of care.

MISSION

The SimEd Network will be an integrated, collaborative learning and research community that strategically improves health system delivery and outcomes by 2021.

ROLE

The SimEd Network enhances the capacity and effectiveness of its members' simulation-based learning and professional development programs.

GUIDING PRINCIPLES

Learner Centredness:	Sharing:	Accountability:	Collaboration:	Professional Development:	Innovation:
We support the person-centred mission of our Network members as they pursue best practices in simulation learning. We believe that through learner, practitioner and instructor feedback, improvements and innovations result.	We believe that our collective efforts lead to synergies that would not otherwise be realized, and that these efforts contribute to a whole that is far greater than any individual node/site, program or faculty department.	We believe in being accountable to our Network members and will conduct ourselves in a transparent manner through reporting and communication of the activities undertaken. We will measure the impact we are making and report our progress to our members.	We value the learning and change that result from a variety of professions and institutions coming together to share their unique perspectives in the interests of safe patient care and interdisciplinary learning.	We believe in enabling a community of highly trained, diverse simulation educators committed to innovation, life-long learning, and the advancement of simulation-based learning.	We are open to trying and evaluating better ways of doing things and to a culture of curiosity and discovery. We believe that our collective curiosity will lead to advances in simulation-based learning.

STRATEGIC DIRECTIONS

GOVERNANCE	INFRASTRUCTURE	COMMUNICATIONS	ACADEMIC EXCELLENCE	TALENT DEVELOPMENT
A best practice governance model that supports the Network's Vision, Mission and objectives.	A robust, sustainable infrastructure that supports current and future Network operations, activities and needs.	Communication that keeps internal and external stakeholders up to date and informed, and heightens the Network's profile.	Strategies, processes and a culture that nurtures and advances ongoing innovations in simulation-based learning.	Faculty and staff proficient, engaged and motivated to translate and apply their expertise and knowledge for the benefit of learners.
